Professional Services Timesheet & Time Off Submission Guide

Purpose: To ensure accurate billing, transparency for clients, and efficient internal reporting, all timesheets must be submitted weekly with clear, concise notes explaining the work performed.

1. Submission Deadline

- **Every Friday by 17:00 (local time)**.
- Month end by 10am (local time) on the last working day of the month.
- Please note late submissions delay invoicing and reporting—please plan accordingly.

2. Timesheet Entry Requirements

- **Project Selection**: Ensure you select the correct project and task.
- **Hours Logged**: Record actual hours worked (not estimates).

3. Notes Structure

Each entry must include:

- **Action Performed**: Start with a verb (e.g., "Configured IVR", "Held workshop", "Prepared report").
- **Purpose/Outcome**: Why the task was done (e.g., "to enable call routing", "to finalise requirements").
- **Specificity**: Avoid vague terms like "general work" or "support".
- **Client-Friendly Language**: Assume the client will read these notes.

Example:

"Configured call routing in PCC to support new queue for Customer Service team."

If you tend to write too much or too little you can use this prompt in Co-pilot:

Create a 20 word timesheet note for this including; the action I performed, the purpose/outcome, Specificity: Avoid vague terms, and in customer friendly language in UK English: PUT YOUR NOTES HERE

4. Best Practices

- Keep notes **under 20 words** but informative.
- Avoid internal jargon or abbreviations.
- Group related tasks under the same project entry where possible.
- Double-check spelling and clarity.

5. Compliance

- PMs will review weekly for completeness and clarity.
- Non-compliant entries may be returned for correction.

Every member of Professional Services required to submit timesheets are responsible to ensure they meet these guidelines. If you have any questions, please reach out to you line manager.

6. Non-Customer projects

All non-project time must be logged to the central **Non-Project Activities** project in Klient.

Core Governance Rule

1. These time codes are strictly for non-project activities.
2. If the activity relates to a specific customer or project:
    - Create a project-specific non-billable task line, and
    - Log your time to that project.
3. Misallocating project work to non-project codes negatively impacts utilisation and forecasting accuracy.

Important: *No work related to a customer project, even if* ***non-billable****, should be logged to these non-project codes.*
If the work relates to a specific customer project, you must:

- *The Project Manager to create a* ***non-billable task line*** *on that customer project, and*
  Log your time ***against that project****, not the Non-Project Activities project-Project Activities project*

Non-Project Time Entry Guidelines (Professional Services)

Time Code Name	Use This When…	Do NOT Use When…	Timesheet Notes Must Include…
Partner Enablement	Running partner enablement sessions, reviewing partner estimates, providing governance guidance to partners.	Supporting a specific customer project delivered by a partner (log to that project instead).	Partner name, purpose of support, outcome or deliverable (e.g., estimate review, enablement session).
Sales / Pre-Sales Support	Discovery calls, solution scoping, effort estimation, SOW drafting prior to contract signature.	Any activity after contract signature or related to an active project.	Opportunity name, activity performed (e.g., estimation, workshop), stage of deal.
Internal Meetings	1:1s, team meetings, leadership forums, town halls, internal alignment sessions.	Customer meetings, project governance sessions, or delivery workshops.	Meeting type, team/group, purpose (e.g., weekly PS sync, leadership review).
Internal Onboarding / Training	Formal training sessions, certifications, onboarding programs, mandatory corporate learning.	Delivering training to a customer or project team (log to project).	Course/program name, topic, duration.
Internal Knowledge Sharing	Running lessons learned sessions, mentoring, updating best practice documentation, leading internal forums.	Learning for personal development only (use onboarding/training instead) or project retros tied to a specific project.	Topic shared, format (session/doc update), audience.
Company Initiatives	Transformation programs, , corporate task forces.	Improving a specific delivery project or customer solution.	Initiative name, objective, deliverable or milestone progressed.
Administration	Timesheet entry, PSA/CRM updates, forecast updates, internal reporting, compliance tasks.	Any customer-facing activity or project-specific admin (e.g., updating RAID log for a project).	Type of admin task (e.g., month-end reporting, PSA update), reason if above normal baseline effort.
Company Events	You participate in a company or department event such as a seasonal party, company kick-off, company offsite	For weekly or monthly team meetings	The name of the event

5. Recording Time Off (Holiday & Sick Leave)

All holiday and sick leave must be recorded in Klient to ensure accurate capacity planning, resource scheduling, and utilisation reporting within the Professional Services organisation.

While HiBob remains the official HR system for submitting and approving leave requests, Klient is the system of record for Professional Services planning and reporting. As there is currently no integration between HiBob and Klient, team members are required to enter time off in both systems.

Why this is important

Recording time off in Klient ensures:

- Team members do not appear as available in the resource planner when they are out of the business
- Project scheduling and capacity planning remain accurate
- Utilisation metrics fairly reflect time spent in or out of the business

How to record time off in Klient

- Navigate to the Time Off section in Klient
- Create a new time off entry for the relevant dates
- Save the request
- Press Submit to register the request correctly

⚠️ **Important:** Saving the entry alone is not sufficient. The request must be submitted for the time off to be recognised by the system.

Important guidance

- Do not log holidays or sick leave against the "Non-Project Activities" timecode.
  Logging time off this way will not mark you as out of the business, which means you may still appear available for project work and it may impact utilisation reporting.
- Holiday requests must still be submitted in HiBob in accordance with the company's HR policies.
- Sick leave should be entered in Klient once you return to work, if it was not recorded at the time.

Following this process ensures the Professional Services team maintains accurate visibility of capacity, availability, and utilisation across the business.
